財務報表與會計原則

中英雙語完整筆記 / Complete Bilingual Notes

編製獨資企業財務報表，理解其背後的會計概念。

獨資企業財務報表（一）

Financial Statements for Sole Proprietorships (I)

理解損益表的目的、格式和主要項目，並能計算銷貨成本、毛利、淨利及淨損失。

Understand the purpose, format and major items of an income statement, and calculate cost of goods sold, gross profit, net profit and net loss.

損益表的目的 Purpose of an Income Statement

損益表列示企業在一段會計期間內的收入、銷貨成本、支出及利潤或損失。	An income statement shows a business's revenues, cost of goods sold, expenses and profit or loss for an accounting period.
它協助東主和管理層評估營運表現，亦讓外部使用者了解企業的盈利能力。	It helps owners and managers evaluate operating performance and allows external users to understand the firm's profitability.
損益表是期間報表，重點是「一段期間發生了甚麼」，與財務狀況表的「某一日擁有甚麼及欠甚麼」不同。	An income statement is a period statement focusing on what happened during a period, unlike a statement of financial position which shows what is owned and owed on a date.

銷貨、購貨與銷貨成本 Sales, Purchases and Cost of Goods Sold

貿易企業購買貨品再出售賺取利潤。計算損益時，須先由銷售收入和銷貨成本計算毛利或毛損。	A trading firm buys goods and resells them for profit. In profit calculation, sales revenue and cost of goods sold are used first to calculate gross profit or gross loss.
銷貨淨額 = 銷貨 – 銷貨退回。銷貨退回是顧客把貨品退回企業，會減少銷售收入。	Net sales = sales – returns inwards. Returns inwards are goods returned by customers and reduce sales revenue.
購貨淨額 = 購貨 – 購貨退回。購貨退回是企業把貨品退回供應商，會減少購貨成本。	Net purchases = purchases – returns outwards. Returns outwards are goods returned to suppliers and reduce purchase cost.
銷貨成本 = 期初存貨 + 購貨淨額 + 購貨運費 – 期末存貨。它代表已售貨品的成本。	Cost of goods sold = opening inventory + net purchases + carriage inwards – closing inventory. It represents the cost of goods sold.

毛利、其他收入與支出 Gross Profit, Other Revenues and Expenses

毛利 = 銷貨淨額 – 銷貨成本。若銷貨成本大於銷貨淨額，則出現毛損。	Gross profit = net sales – cost of goods sold. If cost of goods sold exceeds net sales, there is a gross loss.
其他收入包括佣金收入、租金收入、折扣收入或利息收入，會增加淨利。	Other revenues include commission income, rent income, discount received or interest income, and increase net profit.
支出包括薪金、租金、電費、廣告費、購貨運費以外的營業費用等，會減少淨利。	Expenses include salaries, rent, electricity, advertising and operating expenses other than carriage inwards, and reduce net profit.
淨利 = 毛利 + 其他收入 – 支出。若支出和損失大於毛利及其他收入，則出現淨損失。	Net profit = gross profit + other revenues – expenses. If expenses and losses exceed gross profit and other revenues, there is a net loss.

折扣與運費的處理 Treatment of Discounts and Carriage

商業折扣通常在發票上直接扣減，不另作帳戶記錄；現金折扣則在付款時記錄。	Trade discounts are usually deducted directly on invoices and not recorded in separate accounts; cash discounts are recorded when payment is made.
-------------------------------------	--

折扣給予是給顧客的現金折扣，屬支出；折扣收入是供應商給企業的現金折扣，屬收入。	Discount allowed is a cash discount given to customers and is an expense; discount received is a cash discount given by suppliers and is revenue.
購貨運費是把貨品運到企業的成本，加入銷貨成本；銷貨運費是把貨品送到顧客的費用，列作支出。	Carriage inwards is the cost of bringing goods into the business and is added to cost of goods sold; carriage outwards is delivery cost to customers and is treated as an expense.

垂直式與橫式格式 Vertical and Horizontal Styles

垂直式損益表把項目由上至下排列，較容易展示銷貨淨額、銷貨成本、毛利和淨利的計算過程。	A vertical income statement lists items from top to bottom and clearly shows the calculation of net sales, cost of goods sold, gross profit and net profit.
橫式損益表以左右兩欄呈現收入和支出，但在考試和現代報表中通常較少使用。	A horizontal income statement presents income and expenses in two sides, but it is less common in exams and modern reporting.
不論採用哪種格式，分類、計算和小計邏輯都必須清楚。	Whichever style is used, classification, calculations and subtotals must be clear.

關鍵詞彙 Key Terms

損益表 Income statement 列示企業在一段期間內收入、成本、支出及利潤或損失的報表。 A statement showing revenues, costs, expenses and profit or loss for a period.	貿易企業 Trading firm 購買貨品再出售以賺取利潤的企業。 A business that buys goods and resells them for profit.
銷貨成本 Cost of goods sold 已售貨品的成本。 The cost of goods that have been sold.	毛利 Gross profit 銷貨淨額減銷貨成本後的利潤。 Profit after deducting cost of goods sold from net sales.
毛損 Gross loss 銷貨成本大於銷貨淨額時的損失。 Loss when cost of goods sold exceeds net sales.	淨利 Net profit 毛利加其他收入再扣除支出後的利潤。 Profit after adding other revenues to gross profit and deducting expenses.
銷貨退回 Returns inwards 顧客退回給企業的已售貨品。 Goods sold that are returned by customers.	購貨退回 Returns outwards 企業退回給供應商的已購貨品。 Goods purchased that are returned to suppliers.
購貨運費 Carriage inwards 把購買貨品運到企業的運輸成本，加入銷貨成本。 Transport cost of bringing purchased goods into the business, added to cost of goods sold.	銷貨運費 Carriage outwards 把貨品送到顧客的運輸費用，列作支出。 Delivery cost of sending goods to customers, treated as an expense.
折扣給予 Discounts allowed 企業給顧客提早付款或其他條件的現金折扣，屬支出。 Cash discounts given to customers, treated as an expense.	折扣收入 Discounts received 供應商給企業的現金折扣，屬收入。 Cash discounts received from suppliers, treated as revenue.

DSE 作答提示 Exam Tips

購貨運費加入銷貨成本；銷貨運費列作支出。這是損益表題常見失分位。

Carriage inwards is added to cost of goods sold; carriage outwards is an expense. This is a common exam trap.

商業折扣通常不入帳；現金折扣才會以折扣給予或折扣收入入帳。

Trade discounts are usually not recorded; cash discounts are recorded as discounts allowed or discounts received.

先計毛利，再加入其他收入和扣除支出計淨利，作答格式要保留清楚小計。

Calculate gross profit first, then add other revenues and deduct expenses to find net profit. Keep clear subtotals in answers.

快速自測與答案 Quick Check and Answers

Q1. 購貨運費和銷貨運費在損益表中如何處理？

How are carriage inwards and carriage outwards treated in the income statement?

答案：購貨運費加入銷貨成本；銷貨運費是營業支出，於毛利後扣除。

Answer: Carriage inwards is added to cost of goods sold; carriage outwards is an operating expense deducted after gross profit.

Q2. 毛利和淨利有何分別？

What is the difference between gross profit and net profit?

答案：毛利只比較銷貨淨額和銷貨成本；淨利是在毛利基礎上加入其他收入並扣除支出後的結果。

Answer: Gross profit compares only net sales with cost of goods sold; net profit adds other revenues to gross profit and deducts expenses.

Q3. 商業折扣是否需要記入折扣帳戶？

Should a trade discount be recorded in a discount account?

答案：通常不需要。商業折扣直接從發票價扣減，帳簿只記錄折扣後金額。

Answer: Usually no. Trade discounts are deducted directly from invoice price, and only the net amount is recorded.

獨資企業財務報表（二）

Financial Statements for Sole Proprietorships (II)

理解財務狀況表的目的、資產與負債分類、營運資金，以及財務報表的用途和限制。

Understand the purpose of a statement of financial position, classification of assets and liabilities, working capital, and the uses and limitations of financial statements.

財務狀況表的目的 Purpose of a Statement of Financial Position

財務狀況表列示企業在某一日期的資產、負債及資本，反映企業的財務狀況。

A statement of financial position shows a business's assets, liabilities and capital at a particular date and reflects its financial position.

它是時點報表，屬存量概念；損益表是一段期間報表，屬流量概念。

It is a point-in-time statement and follows a stock concept; an income statement is a period statement and follows a flow concept.

獨資企業的財務狀況表通常以資產減負債得出期末資本，並與東主權益保持一致。

For a sole proprietorship, the statement of financial position usually deducts liabilities from assets to arrive at closing capital, consistent with the owner's equity.

資產與負債分類 Classification of Assets and Liabilities

非流動資產是長期使用並不打算在一年內出售的資源，例如設備、車輛和傢俬。

Non-current assets are resources used for the long term and not intended for sale within one year, such as equipment, vehicles and furniture.

流動資產是預期在短期內轉化為現金、出售或耗用的資源，例如存貨、應收帳款、銀行存款及現金。

Current assets are resources expected to be converted into cash, sold or consumed in the short term, such as inventory, trade receivables, bank and cash.

非流動負債是通常超過一年後才償還的債務，例如長期銀行貸款。

Non-current liabilities are debts usually repayable after more than one year, such as long-term bank loans.

流動負債是通常一年內需要償還的債務，例如應付帳款、應計費用和短期貸款。

Current liabilities are debts usually payable within one year, such as trade payables, accrued expenses and short-term loans.

流動性、耐用性與營運資金 Liquidity, Durability and Working Capital

流動性是資產轉化為現金的速度和容易程度。現金流動性最高，存貨通常較低。

Liquidity is the speed and ease with which an asset can be converted into cash. Cash has the highest liquidity, while inventory is usually less liquid.

耐用性是資產可供企業使用的時間長短。非流動資產通常較耐用，流動資產通常在短期內使用或出售。

Durability refers to how long an asset can be used by a business. Non-current assets are usually more durable, while current assets are used or sold in the short term.

流動資產淨值或營運資金 = 流動資產 - 流動負債。正數代表短期資源大於短期債務。

Net current assets or working capital = current assets - current liabilities. A positive amount means short-term resources exceed short-term debts.

若流動負債大於流動資產，則出現流動負債淨額，企業可能面對短期償債壓力。

If current liabilities exceed current assets, there are net current liabilities and the business may face short-term repayment pressure.

帳戶分類與報表編製 Classification of Ledger Accounts and Statement Preparation

個人帳戶記錄與個人或企業的往來，例如應收帳款和應付帳款。	Personal accounts record dealings with persons or businesses, such as trade receivables and trade payables.
非個人帳戶包括實帳戶和名義帳戶。實帳戶記錄資產；名義帳戶記錄收入、支出、收益和損失。	Impersonal accounts include real accounts and nominal accounts. Real accounts record assets; nominal accounts record revenues, expenses, gains and losses.
名義帳戶通常轉入損益表；資產、負債和資本帳戶通常列入財務狀況表。	Nominal accounts are usually transferred to the income statement; asset, liability and capital accounts are usually shown in the statement of financial position.

財務報表的用途與限制 Uses and Limitations of Financial Statements

財務報表可協助內部和外部使用者評估盈利能力、流動性、財務穩定性及管理表現。	Financial statements help internal and external users evaluate profitability, liquidity, financial stability and management performance.
財務報表主要報告過去結果，未必能準確預測未來表現。	Financial statements mainly report past results and may not accurately predict future performance.
資產常按歷史成本記錄，可能與現時市場價值不同；不同會計政策亦會影響比較。	Assets are often recorded at historical cost, which may differ from current market value; different accounting policies also affect comparison.
財務報表通常缺乏定性資料，例如員工士氣、品牌聲譽、服務質素和管理能力。	Financial statements often lack qualitative information, such as employee morale, brand reputation, service quality and management ability.

關鍵詞彙 Key Terms

財務狀況表 Statement of financial position 列示企業在某一日期資產、負債及資本的報表。 A statement showing assets, liabilities and capital of a business at a particular date.	流量概念 Flow concept 反映一段期間內發生的變動，例如收入和支出。 A concept showing changes over a period, such as revenues and expenses.
存量概念 Stock concept 反映某一日期的結餘或狀態，例如資產和負債。 A concept showing balances or positions at a particular date, such as assets and liabilities.	流動資產 Current assets 預期在短期內轉化為現金、出售或耗用的資產。 Assets expected to be converted into cash, sold or consumed in the short term.
非流動資產 Non-current assets 長期使用並非持作短期出售的資產。 Assets used for the long term and not held for short-term sale.	流動負債 Current liabilities 通常一年內需要償還的債務。 Debts usually payable within one year.
非流動負債 Non-current liabilities 通常超過一年後才償還的債務。 Debts usually repayable after more than one year.	營運資金 Working capital 流動資產減流動負債。 Current assets minus current liabilities.
流動資產淨值 Net current assets 流動資產大於流動負債的差額。 The excess of current assets over current liabilities.	流動負債淨額 Net current liabilities 流動負債大於流動資產的差額。 The excess of current liabilities over current assets.

名義帳戶 **Nominal accounts**

記錄收入、支出、收益和損失的帳戶。

Accounts recording revenues, expenses, gains and losses.

實帳戶 **Real accounts**

記錄資產的帳戶。

Accounts recording assets.

DSE 作答提示 **Exam Tips**

損益表是期間報表；財務狀況表是某一日期的時點報表。題目問目的時要分清。

An income statement is for a period; a statement of financial position is at a point in time. Distinguish them when asked about purposes.

流動資產和非流動資產分類要看用途和預期變現時間，不只看名稱。

Classify current and non-current assets by use and expected realisation period, not only by name.

評估財務報表限制時，要寫出為何會影響決策，例如歷史成本令現時價值被低估或高估。

When evaluating limitations, explain why they affect decisions, such as historical cost understating or overstating current values.

快速自測與答案 **Quick Check and Answers**

Q1. 為何財務狀況表屬於存量概念？

Why does a statement of financial position follow a stock concept?

答案：因為它列示某一日期的資產、負債和資本結餘，而不是一段期間內的流入或流出。

Answer: Because it shows balances of assets, liabilities and capital at a particular date, not inflows or outflows over a period.

Q2. 營運資金如何計算？

How is working capital calculated?

答案：營運資金 = 流動資產 – 流動負債。

Answer: Working capital = current assets – current liabilities.

Q3. 財務報表欠缺定性資料有何限制？

What is the limitation of lacking qualitative information in financial statements?

答案：使用者難以全面評估企業前景，例如品牌聲譽、員工士氣和服務質素可能影響未來表現，但未必反映在數字中。

Answer: Users may not fully assess prospects. For example, brand reputation, staff morale and service quality may affect future performance but may not appear in the figures.

會計假設、原則及慣例

Accounting Assumptions, Principles and Conventions

理解並應用企業實體、歷史成本、持續經營、一貫性及權責發生等基本會計概念。

Understand and apply fundamental accounting concepts including business entity, historical cost, going concern, consistency and accrual.

企業實體假設 Business Entity Assumption

企業實體假設指出企業與東主是分開的會計單位，企業帳簿只記錄企業交易。	The business entity assumption states that the business and its owner are separate accounting units, and the books record only business transactions.
東主私人支出不應記作企業支出；東主取用企業資源應記作提取。	The owner's private expenses should not be recorded as business expenses; resources taken by the owner should be recorded as drawings.
此概念讓使用者清楚分辨企業表現和東主私人活動，提升會計資料的可理解性。	This concept separates business performance from the owner's private activities and improves understandability of accounting information.

歷史成本原則 Historical Cost Principle

歷史成本原則要求資產通常以購入時實際支付的成本入帳，而不是按估計市場價值入帳。	The historical cost principle requires assets to be recorded at the actual cost paid when acquired, rather than estimated market value.
歷史成本有客觀憑證支持，較可靠和容易核實。	Historical cost is supported by objective evidence, making it more reliable and verifiable.
其限制是資產帳面值可能與現時價值不同，特別是在價格大幅變動或資產持有很久時。	Its limitation is that book values may differ from current values, especially when prices change significantly or assets are held for a long time.

持續經營假設 Going Concern Assumption

持續經營假設假定企業會在可預見將來繼續營運，而不是即將清盤。	The going concern assumption assumes that the business will continue operating in the foreseeable future and is not about to liquidate.
因此，非流動資產可按成本扣除折舊列示，而不需要全部按清盤價值記錄。	Therefore, non-current assets can be shown at cost less depreciation instead of being recorded at liquidation value.
若企業面臨嚴重財務困難或即將停業，持續經營假設可能不再適用。	If a business faces serious financial difficulty or is about to close down, the going concern assumption may no longer apply.

一貫性原則 Consistency Principle

一貫性原則要求企業在不同會計期間採用相同的會計政策和方法，除非有合理理由改變。	The consistency principle requires a business to use the same accounting policies and methods across accounting periods unless there is a justified reason to change.
一貫性使不同期間的財務資料可比較，例如折舊方法不應無故每年改變。	Consistency makes financial information comparable across periods; for example, depreciation methods should not change every year without reason.

若方法有重大改變，企業應清楚披露，讓使用者理解對利潤和資產的影響。

If there is a significant change in method, the business should disclose it clearly so users understand its effect on profit and assets.

權責發生原則 Accrual Principle

權責發生原則要求收入在賺取時確認，支出在發生時確認，而不只按現金收付時間入帳。

The accrual principle requires revenue to be recognised when earned and expenses when incurred, not only when cash is received or paid.

因此，期末需要處理應計收入、應計支出、預收收入和預付支出，讓損益表反映正確期間的表現。

Therefore, period-end adjustments for accrued income, accrued expenses, income received in advance and prepaid expenses are needed so the income statement reflects the correct period.

權責發生原則也支援配比概念，將收入與賺取該收入所需支出配對。

The accrual principle also supports matching by pairing revenues with expenses incurred to earn those revenues.

關鍵詞彙 Key Terms

企業實體假設 Business entity assumption

企業與東主在會計上分開處理。

The business and its owner are treated separately in accounting.

歷史成本原則 Historical cost principle

資產通常按購入成本入帳。

Assets are usually recorded at their acquisition cost.

持續經營假設 Going concern assumption

假定企業會在可預見將來繼續營運。

The assumption that the business will continue operating in the foreseeable future.

一貫性原則 Consistency principle

不同期間應採用相同會計政策和方法，以保持可比性。

The same accounting policies and methods should be used across periods to maintain comparability.

權責發生原則 Accrual principle

收入和支出按賺取或發生期間確認，而非只按現金收付確認。

Revenues and expenses are recognised when earned or incurred, not only when cash is received or paid.

配比 Matching

把收入與賺取該收入所需的相關支出配對在同一期間。

Matching revenues with the related expenses incurred to earn them in the same period.

預付支出 Prepaid expenses

已付款但屬於未來期間的支出。

Expenses paid but relating to a future period.

應計支出 Accrued expenses

已發生但尚未付款的支出。

Expenses incurred but not yet paid.

預收收入 Income received in advance

已收款但尚未賺取的收入。

Income received but not yet earned.

應計收入 Accrued income

已賺取但尚未收款的收入。

Income earned but not yet received.

DSE 作答提示 Exam Tips

概念應用題要先點名會計概念，再用題目情境解釋為何適用。

For application questions, name the accounting concept first, then explain why it applies to the case.

歷史成本強調可靠和可核實；其缺點是未必反映現時市場價值。兩面都要掌握。

Historical cost emphasises reliability and verifiability; its weakness is that it may not reflect current market value. Know both sides.

權責發生題要判斷「屬於哪個會計期間」，而不是只看現金何時收付。

For accrual questions, decide which accounting period an item belongs to, not only when cash is received or paid.

快速自測與答案 Quick Check and Answers

Q1. 東主把家庭電費交由企業付款，應用哪個會計概念？

Which accounting concept applies when an owner asks the business to pay household electricity bills?

答案：企業實體假設。家庭電費屬私人支出，不應記作企業支出；若由企業付款，應視作東主提取。

Answer: Business entity assumption. Household electricity is a private expense and should not be recorded as a business expense; if paid by the business, it should be treated as drawings.

Q2. 為何設備通常以成本扣除折舊列示，而不是以清盤價值列示？

Why is equipment usually shown at cost less depreciation instead of liquidation value?

答案：因為持續經營假設假定企業會繼續營運，設備會繼續用於業務，而非即時出售清盤。

Answer: Because the going concern assumption assumes the business will continue operating and the equipment will be used in the business rather than sold immediately in liquidation.

Q3. 已支付下年度保險費，為何不應全數列作本年度支出？

Why should insurance paid for next year not be fully treated as this year's expense?

答案：根據權責發生原則，支出應歸入受益期間；屬於下年度的部分應列作預付支出。

Answer: Under the accrual principle, expenses should be recognised in the period benefited; the part relating to next year should be recorded as a prepaid expense.
