融資與投資評估

中英雙語完整筆記 / Complete Bilingual Notes

比較企業融資來源，並評估資本投資項目。

融資來源

Sources of Financing

比較不同融資來源的特點、優點及限制，並能按企業情境建議合適的短期、長期、債務、股本、內部或外部融資方法。

Compare the features, advantages and limitations of different sources of financing, and suggest suitable short-term, long-term, debt, equity, internal or external financing methods for business situations.

融資的目的與常見方法 Purposes and Common Methods of Financing

企業需要融資以支持日常營運、購買存貨、支付工資、擴展業務、購買非流動資產或應付短期現金流壓力。

A business needs financing to support daily operations, buy inventory, pay wages, expand, purchase non-current assets or handle short-term cash flow pressure.

常見融資方法包括保留盈利、出售資產、商業信用、銀行透支、銀行貸款、租購、租賃、發行股份及發行債券。

Common financing methods include retained profits, sale of assets, trade credit, bank overdraft, bank loan, hire purchase, leasing, issue of shares and issue of debentures.

選擇融資方法時，企業應考慮資金用途、金額、期限、成本、風險、控制權、抵押要求、還款能力及企業形象。

When choosing financing methods, a firm should consider purpose, amount, duration, cost, risk, control, collateral requirements, repayment ability and business image.

短期與長期融資 Short-term and Long-term Financing

短期融資通常用於一年內的資金需要，例如購買存貨、應付季節性需求或暫時現金短缺。例子包括銀行透支及商業信用。

Short-term financing is usually used for needs within one year, such as buying inventory, seasonal demand or temporary cash shortages. Examples include bank overdraft and trade credit.

長期融資適合購買機器、開設分店或長期擴張等需要，因為資產回收期較長。例子包括長期貸款、發行股份及債券。

Long-term financing suits machinery purchase, new branches or long-term expansion because asset recovery takes longer. Examples include long-term loans, share issues and debentures.

用短期融資支持長期資產會增加再融資及流動性風險；用長期融資支付短期需要則可能成本較高且彈性較低。

Using short-term finance for long-term assets increases refinancing and liquidity risk; using long-term finance for short-term needs may be costly and less flexible.

債務融資與股本融資 Debt and Equity Financing

債務融資是借入資金並承諾支付利息和本金，例如銀行貸款、債券和租購。優點是毋須分享控制權，但會增加利息及還款壓力。

Debt financing means borrowing funds with a promise to pay interest and principal, such as bank loans, debentures and hire purchase. It avoids sharing control but increases interest and repayment pressure.

股本融資是透過東主或股東投入資金，例如發行普通股。它沒有固定還款壓力，但可能攤薄控制權和每股盈利。

Equity financing obtains funds from owners or shareholders, such as issuing ordinary shares. It has no fixed repayment pressure but may dilute control and earnings per share.

若企業盈利穩定且負債水平低，債務融資可利用財務槓桿提高回報；若現金流不穩或負債已高，股本或內部融資較穩健。

If profit is stable and gearing is low, debt may use financial leverage to raise returns; if cash flow is unstable or debt is already high, equity or internal finance is more prudent.

內部與外部融資 Internal and External Financing

內部融資來自企業內部，例如保留盈利、出售閒置資產和減少存貨。它成本較低、安排較快，亦不會增加負債或攤薄控制權。

Internal financing comes from within the business, such as retained profits, sale of unused assets and inventory reduction. It is cheaper, faster and does not increase debt or dilute control.

內部融資的限制是金額受企業盈利和資產規模限制，過度依賴保留盈利亦可能令股東不滿。	Internal finance is limited by profit and asset size, and excessive reliance on retained profits may dissatisfy shareholders.
外部融資來自企業以外，例如銀行、供應商、投資者或金融市場。它可提供較大金額，但通常涉及利息、手續、抵押或披露要求。	External financing comes from outside the business, such as banks, suppliers, investors or financial markets. It can provide larger amounts but usually involves interest, procedures, collateral or disclosure requirements.

主要融資方法比較 **Comparing Major Financing Methods**

銀行透支彈性高，適合短期現金流波動，但利率通常較高，銀行可要求企業隨時償還。	Bank overdraft is flexible and suits short-term cash flow fluctuations, but interest is usually high and the bank may demand repayment at any time.
商業信用可延遲向供應商付款，便利且常見，但過度拖延付款會損害供應商關係及信用評級。	Trade credit delays payment to suppliers and is convenient, but excessive delay damages supplier relationships and credit rating.
租購和租賃可讓企業使用昂貴資產而毋須一次過付款，但總成本可能較高，亦可能受合約條款限制。	Hire purchase and leasing allow use of expensive assets without full upfront payment, but total cost may be higher and contract terms may restrict use.
發行股份可籌集大量長期資金而沒有固定利息，但上市或配股成本高，並可能分散控制權。	Issuing shares can raise large long-term funds without fixed interest, but listing or placing costs are high and control may be diluted.

選擇融資方法的原則 **Principles for Selecting Financing Methods**

資金用途應與融資期限配合。短期營運需要宜用短期融資；長期資產或擴張宜用長期融資。	The purpose of funds should match the financing period. Short-term operating needs suit short-term finance; long-term assets or expansion suit long-term finance.
企業要評估成本與風險。利率、手續費、股息期望、抵押、財務風險及對信用評級的影響都應納入考慮。	A firm should assess cost and risk. Interest, fees, dividend expectations, collateral, financial risk and credit rating effects should all be considered.
不同企業情況會影響選擇。初創企業可能較難取得銀行貸款；成熟上市公司則較容易發行股份或債券。	Business circumstances affect choice. A start-up may find bank loans difficult, while a mature listed company can more easily issue shares or debentures.

關鍵詞彙 **Key Terms**

融資 Financing 企業取得資金以支持營運、投資或擴展的活動。 Activities through which a business obtains funds for operations, investment or expansion.	短期融資 Short-term financing 用於一年內資金需要的融資。 Financing used for funding needs within one year.
長期融資 Long-term financing 用於長期資產或長期發展需要的融資。 Financing used for long-term assets or long-term development needs.	債務融資 Debt financing 透過借貸取得資金並需支付利息和本金。 Obtaining funds through borrowing with interest and principal repayment.
股本融資 Equity financing 透過東主或股東投入資金取得資本。 Obtaining capital through investment by owners or shareholders.	內部融資 Internal financing 從企業內部產生的資金來源。 Sources of funds generated within the business.

外部融資 External financing

來自企業以外人士或機構的資金來源。

Sources of funds from parties or institutions outside the business.

保留盈利 Retained profits

沒有分派而留在企業再投資的盈利。

Profits kept in the business for reinvestment instead of distribution.

銀行透支 Bank overdraft

銀行容許企業在限額內提取超過戶口結餘的短期融資。

A short-term facility allowing a business to withdraw more than its bank balance up to a limit.

商業信用 Trade credit

供應商容許企業先取貨後付款的融資方式。

A financing method where suppliers allow a business to buy now and pay later.

債券 Debentures

公司向投資者借入長期資金並承諾支付利息的證券。

Securities through which a company borrows long-term funds and promises interest payments.

租賃 Leasing

企業支付租金使用資產而不一定擁有資產。

Using an asset by paying rentals without necessarily owning it.

DSE 作答提示 Exam Tips

融資建議題要先判斷資金用途和期限，再比較成本、風險和控制權。不要只寫「銀行貸款較方便」。

For financing recommendations, identify purpose and duration first, then compare cost, risk and control. Do not only write “bank loan is convenient”.

比較債務與股本時，要同時寫還款壓力、利息成本、控制權、財務風險和企業是否有能力吸引投資者。

When comparing debt and equity, cover repayment pressure, interest cost, control, financial risk and the firm's ability to attract investors.

短期資金問題不宜直接建議發行股份；購買長期資產亦不宜只用短期透支，除非有明確過渡原因。

For short-term funding problems, issuing shares is usually unsuitable; for long-term assets, relying only on overdraft is also unsuitable unless there is a clear bridging reason.

快速自測與答案 Quick Check and Answers

Q1. 為何購買新機器較適用長期融資？

Why is long-term financing more suitable for buying new machinery?

答案：機器屬長期資產，回收期較長，長期融資可把還款期與資產產生收益的期間配合，減少短期現金流壓力。

Answer: Machinery is a long-term asset with a longer recovery period. Long-term finance matches repayments with the period over which the asset generates returns and reduces short-term cash flow pressure.

Q2. 保留盈利作融資有何優點和限制？

What is one advantage and one limitation of using retained profits as finance?

答案：優點是成本低且不會增加負債或攤薄控制權；限制是金額受盈利限制，亦可能令期望股息的股東不滿。

Answer: It is low-cost and does not increase debt or dilute control; however, the amount is limited by profit and may dissatisfy shareholders expecting dividends.

Q3. 高負債企業為何未必適合再借款？

Why may a highly geared firm not suit further borrowing?

答案：再借款會提高利息和還款壓力，增加財務風險，亦可能令銀行要求更高利率或拒絕貸款。

Answer: Further borrowing increases interest and repayment pressure, raises financial risk and may cause banks to charge higher interest or refuse lending.

資本投資評估

Capital Investment Appraisal

理解影響資本投資決策的財務及非財務因素，並能運用會計回報率、回收期、淨現值及內部回報率評估投資項目。

Understand financial and non-financial factors affecting capital investment decisions and apply accounting rate of return, payback period, net present value and internal rate of return to evaluate investment projects.

資本投資決策的性質 Nature of Capital Investment Decisions

資本投資是把大量資金投入長期資產或項目，例如機器、廠房、資訊系統、新分店或新產品線。

Capital investment involves committing substantial funds to long-term assets or projects such as machinery, factories, IT systems, new branches or new product lines.

資本投資通常金額大、期限長、不可輕易逆轉，錯誤決策會長期影響現金流、成本結構和競爭力。

Capital investment usually involves large amounts, long duration and limited reversibility. Poor decisions can affect cash flow, cost structure and competitiveness for a long time.

投資評估要考慮初始投資、投資年期、預期現金流、殘值、資金成本、風險及機會成本。

Investment appraisal considers initial investment, investment horizon, expected cash flows, residual value, cost of capital, risk and opportunity cost.

財務與非財務因素 Financial and Non-financial Factors

財務因素包括初始成本、年度現金流入及流出、維修成本、殘值、稅務影響、融資成本和預期回報。

Financial factors include initial cost, annual cash inflows and outflows, maintenance costs, residual value, tax effects, financing cost and expected return.

非財務因素包括產品質素、員工士氣、企業形象、環境影響、法律合規、科技可靠性、供應商支援及策略配合。

Non-financial factors include product quality, staff morale, corporate image, environmental impact, legal compliance, technological reliability, supplier support and strategic fit.

ESG 因素可影響投資決策。即使某項目短期回報較高，若帶來污染、聲譽損害或合規風險，仍未必值得採納。

ESG factors can affect investment decisions. Even if a project offers high short-term return, it may not be worthwhile if it causes pollution, reputation damage or compliance risk.

會計回報率 Accounting Rate of Return

會計回報率 = 平均每年會計利潤 / 平均投資額 x 100%。它以會計利潤衡量項目的平均回報。

Accounting rate of return = average annual accounting profit / average investment x 100%. It measures average return using accounting profit.

優點是易於理解，並可與企業目標回報率或其他項目比較。缺點是使用會計利潤而非現金流，亦忽略貨幣時間價值。

It is easy to understand and can be compared with target return or other projects. Its weaknesses are using accounting profit rather than cash flow and ignoring time value of money.

若企業重視會計盈利或投資者報表表現，會計回報率有參考價值；但不應單獨用它判斷項目。

ARR is useful if a firm focuses on accounting profit or reported performance, but it should not be used alone to judge a project.

回收期 Payback Period

回收期是項目累計現金流入收回初始投資所需的時間。回收期越短，資金收回越快，流動性風險通常較低。

Payback period is the time needed for cumulative cash inflows to recover the initial investment. A shorter payback means faster recovery and usually lower liquidity risk.

優點是計算簡單，適合現金流緊張、科技快速變化或風險高的項目。	It is simple to calculate and suits projects where cash flow is tight, technology changes quickly or risk is high.
缺點是忽略回收期後的現金流，也忽略貨幣時間價值，因此可能低估長期收益高的項目。	It ignores cash flows after the payback period and time value of money, so it may undervalue projects with strong long-term returns.

淨現值與貨幣時間價值 Net Present Value and Time Value of Money

貨幣時間價值表示今天的一元通常比未來的一元更有價值，因為今天的資金可投資賺取回報。	Time value of money means one dollar today is usually worth more than one dollar in the future because money today can be invested to earn returns.
淨現值 = 未來現金流入現值總額 – 初始投資。若淨現值為正，項目預期可賺取高於資金成本的回報。	Net present value = total present value of future cash inflows – initial investment. A positive NPV means the project is expected to earn more than the cost of capital.
淨現值的優點是考慮現金流、貨幣時間價值和資金成本；限制是需要估計折現率及未來現金流，估計錯誤會影響結果。	NPV considers cash flow, time value of money and cost of capital. Its limitation is the need to estimate discount rate and future cash flows; wrong estimates affect results.

內部回報率與互斥項目 Internal Rate of Return and Mutually Exclusive Projects

內部回報率是令項目淨現值等於零的折現率。若內部回報率高於資金成本，項目通常可接受。	Internal rate of return is the discount rate that makes a project's NPV equal zero. If IRR exceeds the cost of capital, the project is usually acceptable.
互斥項目是只能選擇其中一個的項目，例如同一地點只能開設一間分店。比較時不應只看單一方法。	Mutually exclusive projects are projects where only one can be chosen, such as opening only one branch at a location. They should not be compared using only one method.
若不同方法給出不同結論，企業應結合淨現值、回收期、風險、策略配合及非財務因素作最終判斷。	If methods give different conclusions, the firm should combine NPV, payback, risk, strategic fit and non-financial factors for final judgement.

投資評估方法的限制 Limitations of Investment Appraisal Methods

所有投資評估方法都依賴預測。銷量、成本、殘值、折現率和經濟環境一旦改變，結果便可能失準。	All appraisal methods rely on forecasts. If sales, costs, residual value, discount rate or economic conditions change, results may become inaccurate.
定量結果不能完全反映策略價值，例如進入新市場、提升品牌、改善安全或符合環保要求。	Quantitative results cannot fully reflect strategic value, such as entering a new market, improving brand, enhancing safety or meeting environmental requirements.
高分作答應說明方法的計算結論，再指出其限制，最後按企業目標和情境作建議。	Strong answers state the method's calculated conclusion, then its limitations, and finally make a recommendation based on business objectives and context.

關鍵詞彙 Key Terms

資本投資 Capital investment 投入資金購買或建立長期資產或長期項目。 Investing funds in long-term assets or long-term projects.	初始投資 Initial investment 項目開始時需要投入的資金。 The funds required at the start of a project.
--	---

投資年期 Investment horizon

投資項目預期運作或產生現金流的期間。

The expected operating or cash-flow-generating period of an investment project.

貨幣時間價值 Time value of money

今天的資金通常比未來相同金額更有價值的概念。

The concept that money today is usually worth more than the same amount in the future.

資金成本 Cost of capital

企業取得和使用資金所需付出的最低回報或成本。

The minimum return or cost required for obtaining and using funds.

會計回報率 Accounting rate of return

平均每年會計利潤相對平均投資額的百分比。

Average annual accounting profit as a percentage of average investment.

回收期 Payback period

收回初始投資所需的時間。

The time needed to recover the initial investment.

淨現值 Net present value

未來現金流現值總額減初始投資。

The total present value of future cash flows minus initial investment.

內部回報率 Internal rate of return

令項目淨現值等於零的折現率。

The discount rate that makes a project's NPV equal zero.

互斥項目 Mutually exclusive projects

只能從中選擇其中一個的投資項目。

Investment projects where only one can be chosen.

折現率 Discount rate

把未來現金流折算為現值所使用的比率。

The rate used to convert future cash flows into present value.

殘值 Residual value

資產在項目完結時預期可收回的價值。

The expected value recoverable from an asset at the end of the project.

DSE 作答提示 Exam Tips

投資評估題要分清利潤和現金流。回收期、淨現值和內部回報率使用現金流；會計回報率使用會計利潤。

For investment appraisal, distinguish profit from cash flow. Payback, NPV and IRR use cash flows; ARR uses accounting profit.

淨現值為正通常表示項目可接受，但仍要考慮非財務因素，例如風險、環境影響及策略配合。

A positive NPV usually means a project is acceptable, but non-financial factors such as risk, environmental impact and strategic fit must still be considered.

比較互斥項目時，不要只選回收期最短或會計回報率最高的項目；要解釋為何該方法適合題目情境。

When comparing mutually exclusive projects, do not simply choose the shortest payback or highest ARR; explain why the method suits the case context.

快速自測與答案 Quick Check and Answers**Q1. 為何淨現值法比回收期法更能反映項目整體價值？**

Why does NPV better reflect the overall value of a project than payback period?

答案：淨現值考慮整個投資年期的現金流和貨幣時間價值；回收期只看收回初始投資前的時間，忽略其後現金流。

Answer: NPV considers cash flows over the whole investment horizon and time value of money, while payback only focuses on the time to recover initial investment and ignores later cash flows.

Q2. 內部回報率高於資金成本代表甚麼？

What does it mean if IRR is higher than the cost of capital?

答案：代表項目預期回報率高於取得資金的最低成本，通常表示項目可接受，但仍需考慮風險和非財務因素。

Answer: It means the expected return exceeds the minimum cost of funds, so the project is usually acceptable, but risk and non-financial factors should still be considered.

Q3. 資本投資決策為何要考慮非財務因素？

Why should non-financial factors be considered in capital investment decisions?

答案：因為投資會影響品牌、員工、環境、合規和長期策略，這些影響未必能完全反映在計算結果中。

Answer: Investment affects brand, staff, environment, compliance and long-term strategy, and these effects may not be fully reflected in calculations.
