財務分析與預算

中英雙語完整筆記 / Complete Bilingual Notes

運用會計比率及預算支援企業財務管理。

財務分析

Financial Analysis

理解財務管理在企業營運中的角色，並能運用主要會計比率評估企業的盈利能力、流動性、償債能力及管理效率。

Understand the role of financial management in running a firm and use key accounting ratios to assess profitability, liquidity, solvency and management efficiency.

財務管理的角色 Role of Financial Management

財務管理是計劃、籌集、運用及控制企業資金的過程，目標是支持企業營運和長遠發展。

Financial management is the process of planning, raising, using and controlling funds to support operations and long-term development.

企業的最終目標通常是提升企業價值或股東財富，但亦要兼顧現金流、風險、持份者利益及法律責任。

The ultimate goal of a firm is usually to increase firm value or shareholders' wealth, while considering cash flow, risk, stakeholders' interests and legal responsibilities.

主要財務決策包括投資決策、融資決策、股息決策及營運資金決策。這些決策會影響企業的風險、回報和流動性。

Major financial decisions include investment, financing, dividend and working capital decisions. They affect risk, return and liquidity.

會計比率分析的用途 Uses of Accounting Ratio Analysis

會計比率把財務報表中的數字轉化為可比較指標，有助分析企業表現和財務狀況。

Accounting ratios convert figures in financial statements into comparable indicators for analysing business performance and financial position.

比率可用作時間序列分析，比較同一企業不同年度的表現；亦可用作橫向分析，比較企業與競爭者或行業平均。

Ratios can be used for time-series analysis across years and cross-sectional analysis against competitors or industry averages.

比率本身不是結論。作答時要說明比率上升或下降的原因、影響及與題目情境的關係。

A ratio itself is not a conclusion. Answers should explain causes, effects and links to the case context.

盈利能力比率 Profitability Ratios

毛利率 = 毛利 / 銷售淨額 × 100%。毛利率反映企業控制銷貨成本及定價的能力。

Gross profit ratio = gross profit / net sales × 100%. It reflects the ability to control cost of goods sold and pricing.

淨利率 = 淨利 / 銷售淨額 × 100%。淨利率反映企業扣除營運開支後，每一元銷售可帶來多少淨利。

Net profit ratio = net profit / net sales × 100%. It shows net profit earned from each dollar of sales after operating expenses.

資本運用回報率 = 扣除利息及稅項前盈利 / 資本運用 × 100%。它衡量企業運用長期資金創造利潤的效率。

Return on capital employed = profit before interest and tax / capital employed × 100%. It measures how efficiently long-term funds generate profit.

盈利能力比率需結合行業特性解讀。低毛利率未必一定差，若企業採用低價高銷量策略，仍可能取得合理回報。

Profitability ratios must be interpreted with industry context. A low gross profit ratio is not always poor if a low-price high-volume strategy produces reasonable returns.

流動性與償債能力比率 Liquidity and Solvency Ratios

流動比率 = 流動資產 / 流動負債，反映企業以短期資產償還短期債務的能力。

Current ratio = current assets / current liabilities. It reflects the ability to pay short-term debts using short-term assets.

速動比率 = 速動資產 / 流動負債，其中速動資產通常不包括存貨，因為存貨較難即時變現。

Quick ratio = quick assets / current liabilities, where quick assets usually exclude inventory because it is less immediately realisable.

資本負債比率 = 長期負債 / 資本運用 x 100%。比率越高，企業依賴借貸資金越多，財務風險和利息負擔通常越高。	Gearing ratio = long-term liabilities / capital employed x 100%. A higher ratio means greater reliance on debt, usually higher financial risk and interest burden.
流動性過低可能導致付款困難；過高則可能代表資金閒置、存貨過多或應收帳款管理欠佳。	Too low liquidity may cause payment difficulties; too high liquidity may indicate idle funds, excessive inventory or weak receivables management.

管理效率比率 Management Efficiency Ratios

存貨周轉率 = 銷貨成本 / 平均存貨。周轉越快，通常表示存貨管理較有效，但亦要避免缺貨。	Inventory turnover = cost of goods sold / average inventory. Faster turnover usually indicates more effective inventory management, but stockouts should be avoided.
應收帳款周轉期 = 平均應收帳款 / 賒銷淨額 x 365日。期數越短，通常代表收款較快。	Trade receivables turnover period = average trade receivables / net credit sales x 365 days. A shorter period usually means faster collection.
應付帳款周轉期 = 平均應付帳款 / 賒購淨額 x 365日。期數過長可能改善現金流，但亦可能損害供應商關係。	Trade payables turnover period = average trade payables / net credit purchases x 365 days. A longer period may improve cash flow but can damage supplier relationships.
總資產周轉率 = 銷售淨額 / 總資產，反映企業利用資產產生銷售的效率。	Total assets turnover = net sales / total assets. It reflects how efficiently assets are used to generate sales.

比率分析的限制 Limitations of Ratio Analysis

會計比率主要依賴歷史財務資料，未必能反映未來表現、品牌價值、員工質素或市場變化。	Ratios rely mainly on historical financial data and may not reflect future performance, brand value, staff quality or market changes.
不同企業可能採用不同會計政策、年結日或估值方法，令比率未必完全可比。	Different firms may use different accounting policies, year-end dates or valuation methods, making ratios not fully comparable.
通脹、一次性項目、季節性因素及櫥窗粉飾都可能扭曲比率。分析時應同時考慮非財務資料和管理解釋。	Inflation, one-off items, seasonal factors and window dressing may distort ratios. Analysis should also consider non-financial information and management explanations.

關鍵詞彙 Key Terms

財務管理 Financial management 計劃、籌集、運用及控制企業資金的管理活動。 Management activities for planning, raising, using and controlling business funds.	投資決策 Investment decisions 決定企業資金應投入哪些資產或項目。 Decisions about which assets or projects business funds should be invested in.
融資決策 Financing decisions 決定企業應從股本、借貸或其他來源取得資金。 Decisions about obtaining funds from equity, debt or other sources.	股息決策 Dividend decisions 決定利潤應分派予股東或保留於企業。 Decisions about distributing profit to shareholders or retaining it in the business.
營運資金決策 Working capital decisions 管理現金、存貨、應收及應付帳款等短期資金項目。 Managing short-term finance items such as cash, inventory, receivables and payables.	會計比率 Accounting ratios 以財務報表數字計算的指標，用作分析企業表現和財務狀況。 Indicators calculated from financial statements to analyse performance and financial position.

盈利能力比率 Profitability ratios

衡量企業創造利潤能力的比率。

Ratios measuring a firm's ability to generate profit.

毛利率 Gross profit ratio

毛利佔銷售淨額的百分比。

Gross profit as a percentage of net sales.

淨利率 Net profit ratio

淨利佔銷售淨額的百分比。

Net profit as a percentage of net sales.

資本運用回報率 Return on capital employed

企業運用資本賺取利潤的效率指標。

An indicator of how efficiently capital is used to earn profit.

流動比率 Current ratio

流動資產相對流動負債的倍數。

Current assets relative to current liabilities.

速動比率 Quick ratio

速動資產相對流動負債的倍數。

Quick assets relative to current liabilities.

資本負債比率 Gearing ratio

長期負債佔資本運用的百分比。

Long-term liabilities as a percentage of capital employed.

時間序列分析 Time-series analysis

比較同一企業不同期間的比率。

Comparing ratios of the same firm over different periods.

橫向分析 Cross-sectional analysis

比較不同企業或行業平均的比率。

Comparing ratios among different firms or with industry averages.

DSE 作答提示 Exam Tips

比率題要有三步：列公式、代入計算、解釋意義。只有計算而沒有分析，通常不能取得高分。

For ratio questions, use three steps: formula, calculation and interpretation. Calculations alone usually cannot score highly.

解釋比率變化時，要連接原因和後果。例如淨利率下降可能因開支增加，會削弱盈利能力和投資者信心。

When explaining ratio changes, connect causes and consequences. For example, a falling net profit ratio may be due to higher expenses and may weaken profitability and investor confidence.

比較兩間企業時，不要只說「較高較好」。要按行業、策略、風險和資金結構判斷。

When comparing two firms, do not simply say "higher is better". Judge according to industry, strategy, risk and capital structure.

快速自測與答案 Quick Check and Answers

Q1. 為何流動比率過高未必一定好？

Why is a very high current ratio not always good?

答案：它可能代表企業持有過多現金、存貨或應收帳款，資金未被有效運用，因而降低回報。

Answer: It may mean the firm holds too much cash, inventory or receivables, so funds are not used efficiently and returns may fall.

Q2. 資本負債比率上升代表甚麼風險？

What risk is indicated by a rising gearing ratio?

答案：企業更依賴借貸，利息負擔和還款壓力增加，在利潤下降或利率上升時風險更高。

Answer: The firm relies more on debt, increasing interest burden and repayment pressure, especially when profit falls or interest rates rise.

Q3. 比率分析有何主要限制？

What is a major limitation of ratio analysis?

答案：比率多根據歷史財務資料計算，未必反映未來市場、品牌、員工質素及其他非財務因素。

Answer: Ratios are mostly based on historical financial data and may not reflect future markets, brand, staff quality and other non-financial factors.

預算

Budgeting

理解預算的目的、預算控制的用途與限制，並能辨認銷售、材料及勞工差異的原因和改善行動。

Understand the purposes of budgeting, the usefulness and limitations of budgetary control, and identify causes and remedial actions for sales, materials and labour variances.

預算的性質與目的 Nature and Purposes of Budgeting

預算是以數字表達的未來計劃，通常列出預期收入、成本、現金流、產量或資源需要。	A budget is a future plan expressed in figures, usually showing expected revenue, costs, cash flow, output or resource needs.
總預算是把各部門或功能預算整合成整體財務計劃，例如銷售預算、採購預算、現金預算及預算損益表。	A master budget combines departmental or functional budgets into an overall financial plan, such as sales, purchases, cash budgets and budgeted income statement.
預算有助規劃、協調、溝通、資源分配、授權、控制和績效評估。	Budgets help planning, coordination, communication, resource allocation, authorisation, control and performance evaluation.

預算原則與預算控制 Budgeting Principles and Budgetary Control

有效預算應清晰、可量度、可達成、有彈性，並與企業目標和部門責任一致。	An effective budget should be clear, measurable, achievable, flexible and aligned with business objectives and departmental responsibilities.
預算控制是把實際結果與預算比較，分析差異，並採取改善行動的過程。	Budgetary control is the process of comparing actual results with budgets, analysing variances and taking corrective actions.
管理層應把預算視為控制和學習工具，而不是只用作責備員工，否則可能引起抗拒和資料操控。	Management should treat budgets as tools for control and learning, not only for blaming staff, otherwise resistance and data manipulation may arise.

預算控制的用途與限制 Usefulness and Limitations of Budgetary Control

預算控制可及早發現問題，例如銷售不足、成本超支、現金短缺或生產效率下降。	Budgetary control can detect problems early, such as weak sales, cost overruns, cash shortages or lower production efficiency.
預算可提供績效標準，令部門主管清楚責任，並協助企業把資源投放到優先項目。	Budgets provide performance standards, clarify departmental responsibility and help allocate resources to priorities.
限制包括預測不準、外部環境變化、編製成本高、目標過於僵化，以及員工為達標而犧牲長遠利益。	Limitations include inaccurate forecasts, external changes, high preparation cost, overly rigid targets and staff sacrificing long-term interests to meet targets.

預算差異 Budgeting Variances

預算差異是實際結果與預算數字之間的差額。差異可分為有利差異和不利差異。	A budgeting variance is the difference between actual results and budgeted figures. It can be favourable or unfavourable.
有利差異通常表示實際收入高於預算或實際成本低於預算；不利差異通常表示實際收入低於預算或成本高於預算。	A favourable variance usually means actual revenue exceeds budget or actual cost is below budget; an unfavourable variance usually means revenue is below budget or cost exceeds budget.

差異需要按金額大小、頻率、可控制性和對企業目標的影響排序處理，並非每項差異都值得深入調查。

Variances should be prioritised by size, frequency, controllability and impact on business objectives; not every variance deserves detailed investigation.

銷售、材料及勞工差異 Sales, Materials and Labour Variances

銷售差異可能來自需求改變、價格策略、推廣成效、競爭、產品質素、天氣或供應不足。改善行動包括調整價格、加強推廣或改善分銷。

Sales variance may result from demand changes, pricing, promotion effectiveness, competition, product quality, weather or supply shortages. Actions include adjusting price, strengthening promotion or improving distribution.

材料差異可能來自原材料價格上升、採購折扣減少、浪費、偷竊、低質物料或生產規格改變。改善行動包括重新議價、轉換供應商和加強存貨控制。

Materials variance may arise from higher material prices, fewer purchase discounts, wastage, theft, low-quality materials or specification changes. Actions include renegotiating, changing suppliers and strengthening inventory control.

勞工差異可能來自工資率變動、加班、員工效率、培訓不足、機器故障或生產排程欠佳。改善行動包括培訓、改善排班和維修設備。

Labour variance may arise from wage rate changes, overtime, worker efficiency, insufficient training, machine breakdowns or poor scheduling. Actions include training, better rostering and equipment maintenance.

差異分析的管理應用 Management Use of Variance Analysis

差異分析應找出可控制原因和不可控制原因。例如市場需求突然下跌可能不由銷售部完全控制。

Variance analysis should identify controllable and uncontrollable causes. For example, a sudden fall in market demand may not be fully controllable by the sales department.

管理層應避免只看單一差異。低材料成本可能源於低質物料，反而造成退貨、維修或品牌受損。

Management should avoid looking at one variance alone. Low material cost may result from low-quality materials, causing returns, repairs or brand damage.

有效跟進包括調查原因、提出行動、分配責任、設定時間表，並在下一期檢查改善是否有效。

Effective follow-up includes investigating causes, proposing actions, assigning responsibility, setting deadlines and checking improvement in the next period.

關鍵詞彙 Key Terms

預算 Budget

以數字表達的未來計劃。
A future plan expressed in figures.

總預算 Master budget

整合各功能或部門預算而成的整體預算。
An overall budget combining functional or departmental budgets.

預算控制 Budgetary control

比較實際結果與預算、分析差異及採取改善行動的過程。
The process of comparing actual results with budgets, analysing variances and taking corrective actions.

預算原則 Budgeting principles

編製有效預算時應遵守的清晰、可行、協調及彈性等原則。
Principles for effective budgets, such as clarity, achievability, coordination and flexibility.

預算差異 Budgeting variance

實際結果與預算數字之間的差額。
The difference between actual results and budgeted figures.

有利差異 Favourable variance

對利潤或現金流有正面影響的差異。
A variance with a positive effect on profit or cash flow.

不利差異 Unfavourable variance

對利潤或現金流有負面影響的差異。
A variance with a negative effect on profit or cash flow.

銷售差異 Sales variance

實際銷售收入或數量與預算之間的差異。
The difference between actual and budgeted sales revenue or volume.

材料差異 **Materials variance**

實際材料成本或用量與預算之間的差異。

The difference between actual and budgeted material cost or usage.

勞工差異 **Labour variance**

實際勞工成本或工時與預算之間的差異。

The difference between actual and budgeted labour cost or hours.

改善行動 **Remedial actions**

針對差異原因採取的修正或改善措施。

Corrective or improvement measures taken in response to causes of variances.

DSE 作答提示 **Exam Tips**

預算題要分清「編製預算」和「預算控制」。前者是計劃，後者是比較、分析和跟進。

For budgeting questions, distinguish “preparing budgets” from “budgetary control”. The former is planning; the latter is comparison, analysis and follow-up.

差異題不要只寫「實際大於預算」。要指出差異是否有利、可能原因，以及企業可採取的具體行動。

For variance questions, do not only state “actual is higher than budget”. Explain whether it is favourable, possible causes and specific actions.

提出改善行動時要對應原因。若材料差異由浪費造成，行動應是改善生產控制，而不是單純加價。

Remedial actions must match causes. If materials variance is caused by wastage, action should improve production control, not simply raise prices.

快速自測與答案 **Quick Check and Answers**

Q1. 預算控制如何協助企業管理成本？

How does budgetary control help a business manage costs?

答案：企業可把實際成本與預算比較，找出超支項目，分析原因並採取改善行動，例如重新議價或減少浪費。

Answer: The business compares actual costs with budgets, identifies overspending, analyses causes and takes actions such as renegotiation or reducing wastage.

Q2. 為何不利材料差異可能出現？

Why may an unfavourable materials variance occur?

答案：可能因材料價格上升、浪費增加、低效率生產、偷竊或使用較多物料而令實際材料成本高於預算。

Answer: It may occur because material prices rise, wastage increases, production is inefficient, theft occurs or more materials are used, making actual material cost exceed budget.

Q3. 預算控制有何限制？

What is one limitation of budgetary control?

答案：預算依賴預測，若市場環境突然改變，原有預算可能不再合理，僵化執行會導致錯誤決策。

Answer: Budgets rely on forecasts. If the market changes suddenly, the original budget may no longer be reasonable, and rigid use can lead to poor decisions.
