會計基礎

中英雙語完整筆記 / Complete Bilingual Notes

由會計用途、會計等式及複式記帳建立完整基礎。

會計的目的與角色

Purposes and Role of Accounting

理解會計的功能、會計資料對決策的重要性，以及完整會計循環由原始憑證到財務報表的流程。

Understand the functions of accounting, the importance of accounting information for decision-making, and the complete accounting cycle from source documents to financial statements.

會計的定義與功能 Definition and Functions of Accounting

會計是記錄、分類、總結及傳達財務資料的過程，目的是協助使用者了解企業表現及作出決策。

Accounting is the process of recording, classifying, summarising and communicating financial information to help users understand business performance and make decisions.

記錄是把交易按日期和金額寫入帳簿；分類是把相同性質的項目歸入相關帳戶；總結是把大量資料整理成報表；傳達是把結果提供給使用者。

Recording enters transactions by date and amount; classifying groups similar items into accounts; summarising organises data into statements; communicating provides results to users.

簿記偏重日常交易的記錄；會計範圍較闊，還包括資料分析、報告、解釋及支援決策。

Bookkeeping focuses on daily transaction recording; accounting is broader and includes analysis, reporting, interpretation and decision support.

會計資料與決策 Accounting Information and Decision-Making

東主和管理層利用會計資料評估盈利能力、成本控制、現金流及企業是否需要擴張或調整營運。

Owners and managers use accounting information to assess profitability, cost control, cash flow and whether the business should expand or adjust operations.

貸款人和供應商關心企業的償債能力；投資者關心回報和風險；政府則可能利用資料作稅務和監管用途。

Lenders and suppliers focus on solvency; investors focus on returns and risks; governments may use information for taxation and regulation.

有用的會計資料應具相關性、可靠性、可比較性和及時性。若資料錯誤或過時，決策質素會下降。

Useful accounting information should be relevant, reliable, comparable and timely. If information is inaccurate or outdated, decision quality decreases.

企業實體概念 Business Entity Concept

企業實體概念要求把企業與東主視為兩個獨立會計單位，即使獨資企業在法律上未必與東主分開。

The business entity concept requires the business and owner to be treated as separate accounting units, even if a sole proprietorship may not be legally separate from its owner.

東主私人支出不應記作企業費用；東主從企業取走現金或貨品，應記作提用而非企業營運費用。

An owner's private expenses should not be recorded as business expenses; cash or goods taken by the owner should be recorded as drawings, not operating expenses.

此概念令會計記錄只反映企業本身的交易，避免私人交易混入而扭曲企業表現。

This concept ensures accounting records reflect only business transactions and prevents private transactions from distorting business performance.

會計循環 Accounting Cycle

會計循環由辨認交易和收集原始憑證開始，再記入原始分錄簿，然後過帳至分類帳。

The accounting cycle starts with identifying transactions and collecting source documents, then recording them in books of original entry and posting them to ledgers.

分類帳帳戶期末會平帳，結餘用來編製試算表。試算表協助檢查借貸總額是否相等。

Ledger accounts are balanced off at period-end, and their balances are used to prepare a trial balance. The trial balance helps check whether debit and credit totals agree.

完成期末調整後，企業會編製財務報表，例如損益表及財務狀況表，向使用者傳達會計結果。

After period-end adjustments, the business prepares financial statements such as the income statement and statement of financial position to communicate accounting results.

關鍵詞彙 Key Terms

會計 Accounting

記錄、分類、總結及傳達財務資料的過程。

The process of recording, classifying, summarising and communicating financial information.

簿記 Bookkeeping

日常記錄企業交易的工作。

The work of recording business transactions on a day-to-day basis.

記錄 Recording

把交易資料按日期及金額寫入帳簿。

Entering transaction information into books by date and amount.

分類 Classifying

把相同性質的交易歸入相關帳戶。

Grouping transactions of the same nature into relevant accounts.

總結 Summarising

把大量會計資料整理成有用的報表或摘要。

Organising large amounts of accounting data into useful statements or summaries.

傳達 Communicating

把會計結果提供給使用者作決策。

Providing accounting results to users for decision-making.

企業實體 Business entity

會計上把企業視為與東主分開的單位。

An accounting view that treats the business as separate from its owner.

會計循環 Accounting cycle

由原始憑證至財務報表的一連串會計程序。

A series of accounting procedures from source documents to financial statements.

原始憑證 Source documents

支持交易記錄的證據文件。

Documents providing evidence for transaction records.

試算表 Trial balance

列示分類帳結餘以檢查借貸總額是否相等的報表。

A statement listing ledger balances to check whether total debits equal total credits.

DSE 作答提示 Exam Tips

問會計功能時，不要只寫「記錄交易」。完整答案應包括記錄、分類、總結及傳達，並連結到決策用途。

For functions of accounting, do not write only “recording transactions”. A complete answer should include recording, classifying, summarising and communicating, linked to decision-making.

遇到東主私人支出或提款，要用企業實體概念解釋：企業和東主在會計上分開處理。

For owner's private expenses or withdrawals, explain using the business entity concept: the business and owner are treated separately in accounting.

會計循環題要按次序作答：原始憑證、原始分錄簿、分類帳、試算表、調整、財務報表。

For accounting cycle questions, answer in order: source documents, books of original entry, ledgers, trial balance, adjustments and financial statements.

快速自測與答案 Quick Check and Answers

Q1. 會計和簿記有何分別？

What is the difference between accounting and bookkeeping?

答案：簿記主要是日常記錄交易；會計除記錄外，還包括分類、總結、傳達及解釋資料以支援決策。

Answer: Bookkeeping mainly records daily transactions; accounting also classifies, summarises, communicates and interprets information to support decisions.

Q2. 為何東主私人支出不應列作企業費用？

Why should an owner's private expenses not be treated as business expenses?

答案：根據企業實體概念，企業與東主在會計上分開，私人支出不屬企業營運成本。

Answer: Under the business entity concept, the business and owner are separate in accounting, so private expenses are not business operating costs.

Q3. 試算表在會計循環中有甚麼作用？

What is the role of the trial balance in the accounting cycle?

答案：它列示分類帳結餘，檢查借貸總額是否相等，並為期末調整和財務報表提供資料。

Answer: It lists ledger balances, checks whether debit and credit totals agree, and provides information for adjustments and financial statements.

會計等式

The Accounting Equation

掌握資產、負債及資本的關係，理解收入、費用及提用如何影響資本，並能分析交易對會計等式的影響。

Master the relationship among assets, liabilities and capital, understand how revenues, expenses and drawings affect capital, and analyse the effects of transactions on the accounting equation.

基本會計等式 Basic Accounting Equation

會計等式是「資產 = 負債 + 資本」。它表示企業擁有的資源由債權人及東主提供資金。

The accounting equation is “Assets = Liabilities + Capital”. It shows that resources owned by a business are financed by creditors and the owner.

資產是企業擁有或控制並預期帶來未來經濟利益的資源，例如現金、銀行存款、存貨、設備及應收帳款。

Assets are resources owned or controlled by a business and expected to bring future economic benefits, such as cash, bank deposits, inventory, equipment and trade receivables.

負債是企業對外部人士的現時責任，例如應付帳款、銀行貸款及應計費用。資本是東主對企業資產淨額的權益。

Liabilities are present obligations owed to outsiders, such as trade payables, bank loans and accrued expenses. Capital is the owner’s interest in the net assets of the business.

收入、費用與資本 Revenues, Expenses and Capital

收入增加資本，因為收入提高企業的資產淨額；費用減少資本，因為費用消耗企業資源或產生責任。

Revenues increase capital because they increase net assets; expenses decrease capital because they consume resources or create obligations.

淨利會增加資本，淨虧損會減少資本。期末資本可表示為：期初資本 + 追加資本 + 淨利 – 提用。

Net profit increases capital, while net loss decreases capital. Closing capital can be shown as: opening capital + additional capital + net profit – drawings.

提用是東主從企業取走現金、貨品或其他資產作私人用途。提用會減少資產及資本，但不是企業費用。

Drawings are cash, goods or other assets taken by the owner for private use. Drawings reduce assets and capital but are not business expenses.

交易對等式的影響 Effects of Transactions on the Equation

每項交易都至少影響兩個項目，但會計等式必須保持平衡。例如東主投入現金，資產增加，資本亦增加。

Every transaction affects at least two items, but the accounting equation must remain balanced. For example, when the owner invests cash, assets increase and capital also increases.

以現金購買設備會令一項資產增加、另一項資產減少，總資產和資本不變。

Buying equipment for cash increases one asset and decreases another asset, leaving total assets and capital unchanged.

除購貨品會令資產增加，同時負債增加；償還供應商欠款會令資產減少，同時負債減少。

Credit purchases of goods increase assets and liabilities; paying a supplier reduces assets and liabilities.

賺取收入通常令資產增加和資本增加；支付費用通常令資產減少和資本減少。

Earning revenue usually increases assets and capital; paying expenses usually decreases assets and capital.

常見資產與負債項目 Common Asset and Liability Items

固定存款是存放在銀行一段固定期間以賺取利息的資產，通常按到期時間判斷屬流動或非流動資產。

A fixed deposit is an asset placed with a bank for a fixed period to earn interest. It is classified as current or non-current according to its maturity.

債務人是欠企業款項的人或企業，在現代報表中常稱為應收帳款；債權人是企業欠款的對象，常稱為應付帳款。

A debtor is a person or business owing money to the firm, commonly called trade receivable; a creditor is a person or business to whom the firm owes money, commonly called trade payable.

分析題目時，要先判斷交易涉及資產、負債、資本、收入、費用或提用，再寫出每一項增加或減少。

When analysing a transaction, first identify whether it involves assets, liabilities, capital, revenues, expenses or drawings, then state whether each item increases or decreases.

關鍵詞彙 Key Terms

資產 Assets

企業擁有或控制並預期帶來未來經濟利益的資源。

Resources owned or controlled by a business and expected to bring future economic benefits.

負債 Liabilities

企業對外部人士承擔的現時責任。

Present obligations of a business owed to outsiders.

資本 Capital

東主在企業資產淨額中的權益。

The owner's interest in the net assets of the business.

會計等式 Accounting equation

資產 = 負債 + 資本。

Assets = Liabilities + Capital.

收入 Revenues

企業日常營運產生並增加資本的收益。

Income generated from ordinary operations that increases capital.

費用 Expenses

企業為賺取收入而消耗的成本，會減少資本。

Costs consumed to earn revenue, reducing capital.

提用 Drawings

東主從企業取走資產作私人用途。

Assets taken by the owner from the business for private use.

固定存款 Fixed deposit

存放於銀行固定期間以賺取利息的款項。

Money placed with a bank for a fixed period to earn interest.

債務人 Debtor

欠企業款項的人或企業。

A person or business owing money to the firm.

債權人 Creditor

企業欠款的對象。

A person or business to whom the firm owes money.

DSE 作答提示 Exam Tips

會計等式題不能只寫「平衡」。要列明每個項目的類別和方向，例如「資產增加，負債增加」。

For accounting equation questions, do not only write "balanced". State the class and direction of each item, such as "assets increase, liabilities increase".

提用不是費用。它減少資產和資本，不應放入損益表作營運費用處理。

Drawings are not expenses. They reduce assets and capital and should not be treated as operating expenses in the income statement.

收入和費用可先轉化為資本影響：收入令資本增加，費用令資本減少，這樣較容易保持等式平衡。

Convert revenues and expenses into capital effects first: revenues increase capital and expenses decrease capital. This makes it easier to keep the equation balanced.

快速自測與答案 Quick Check and Answers

Q1. 東主投入現金開業，會計等式如何改變？

How does the accounting equation change when the owner invests cash to start the business?

答案：現金資產增加，資本增加，資產與資金來源同時增加，等式仍然平衡。

Answer: Cash assets increase and capital increases. Assets and sources of finance both increase, so the equation remains balanced.

Q2. 支付租金費用對會計等式有甚麼影響？

What is the effect of paying rent expense on the accounting equation?

答案：現金或銀行資產減少，費用令資本減少，因此資產和資本同時減少。

Answer: Cash or bank assets decrease, and the expense reduces capital. Therefore, assets and capital both decrease.

Q3. 賒購貨品會影響哪些項目？

Which items are affected by credit purchases of goods?

答案：存貨或購貨增加，並產生應付帳款；按等式分析即資產增加，負債增加。

Answer: Inventory or purchases increase and trade payables arise. In equation terms, assets increase and liabilities increase.

複式記帳制度

Double-Entry System

掌握複式記帳的借貸原則，能把交易記入分類帳，並在期末平帳、分辨期初及期末結餘。

Master debit and credit principles of double entry, record transactions in ledgers, and balance off accounts at period-end while distinguishing opening and closing balances.

複式記帳的基本原則 Basic Principle of Double Entry

複式記帳要求每項交易同時記入至少兩個帳戶，一方借記，另一方貸記，借方金額必須等於貸方金額。

Double entry requires each transaction to be recorded in at least two accounts, one debit and one credit, with total debits equal to total credits.

借方和貸方不是「增加」或「減少」的固定同義詞。不同帳戶類別的增加方向不同，要先判斷帳戶性質。

Debit and credit are not fixed synonyms for “increase” or “decrease”. Different account classes increase on different sides, so identify the account nature first.

分類帳帳戶通常以 T 字帳形式學習，左方為借方，右方為貸方。

Ledger accounts are often learned using T-accounts, with the left side as debit and the right side as credit.

借貸規則 Debit and Credit Rules

資產及費用增加記借方，減少記貸方。現金、銀行、存貨、設備、租金費用及薪金費用通常按此規則處理。

Increases in assets and expenses are debited, and decreases are credited. Cash, bank, inventory, equipment, rent expense and salaries expense usually follow this rule.

負債、資本及收入增加記貸方，減少記借方。應付帳款、資本、銷售及佣金收入通常按此規則處理。

Increases in liabilities, capital and revenues are credited, and decreases are debited. Trade payables, capital, sales and commission income usually follow this rule.

提用會減少資本，但為方便記錄，通常借記提用帳戶，期末再轉入資本帳戶。

Drawings reduce capital, but for recording convenience they are usually debited to the drawings account and transferred to the capital account at period-end.

記錄交易至分類帳 Recording Transactions in Ledgers

記錄交易前應先回答三個問題：涉及哪些帳戶？每個帳戶屬於哪一類？該帳戶是增加還是減少？

Before recording a transaction, ask three questions: which accounts are involved, what class each account belongs to, and whether each account increases or decreases.

例如以現金購買設備：設備是資產增加，借記設備；現金是資產減少，貸記現金。

For example, buying equipment for cash: equipment is an asset increase, so debit equipment; cash is an asset decrease, so credit cash.

例如除銷貨品：應收帳款是資產增加，借記應收帳款；銷售是收入增加，貸記銷售。

For credit sales of goods: trade receivables are an asset increase, so debit trade receivables; sales are revenue increase, so credit sales.

平帳與結餘 Balancing Off Accounts and Balances

平帳是期末比較帳戶借方和貸方總額，找出差額並結轉至下一期的程序。

Balancing off is the period-end process of comparing debit and credit totals, finding the difference and carrying it forward to the next period.

期末結餘通常以 balance carried down (c/d) 表示，放在金額較小的一方以令兩邊相等；下一期以 balance brought down (b/d) 開帳。	The closing balance is usually shown as balance carried down (c/d) on the smaller side to make both sides equal; it reopens next period as balance brought down (b/d).
借方結餘表示帳戶借方總額大於貸方總額；貸方結餘表示貸方總額大於借方總額。資產通常有借方結餘，負債和資本通常有貸方結餘。	A debit balance means debit totals exceed credit totals; a credit balance means credit totals exceed debit totals. Assets usually have debit balances, while liabilities and capital usually have credit balances.

期初與期末結餘 Opening and Closing Balances

期初結餘是上一期結轉到本期的帳戶餘額。它顯示本期開始時企業仍持有的資產、負債或資本。	An opening balance is the account balance brought forward from the previous period. It shows assets, liabilities or capital still existing at the start of the period.
期末結餘是本期期末帳戶平帳後留下並結轉到下一期的餘額。	A closing balance is the amount remaining after balancing an account at period-end and carried forward to the next period.
收入及費用等名義帳戶通常期末轉入損益帳戶，不會像資產或負債帳戶一樣直接帶到下一期。	Nominal accounts such as revenues and expenses are usually transferred to the profit and loss account at period-end and are not carried forward directly like asset or liability accounts.

關鍵詞彙 Key Terms

複式記帳制度 Double-entry system 每項交易以相等金額同時作借方及貸方記錄的制度。 A system recording each transaction with equal debit and credit entries.	複式帳戶 Double-entry accounts 以借方和貸方兩邊記錄交易的帳戶。 Accounts that record transactions on debit and credit sides.
借方 Debit 帳戶左方；資產和費用增加通常記在此方。 The left side of an account; increases in assets and expenses are usually recorded here.	貸方 Credit 帳戶右方；負債、資本和收入增加通常記在此方。 The right side of an account; increases in liabilities, capital and revenues are usually recorded here.
平帳 Balancing off accounts 比較帳戶兩邊總額並計算結餘的程序。 The process of comparing both sides of an account and calculating its balance.	期初結餘 Opening balance / Balance brought down 由上一期帶入本期的帳戶結餘。 An account balance brought forward from the previous period.
期末結餘 Closing balance / Balance carried down 本期期末計算並帶到下一期的帳戶結餘。 An account balance calculated at period-end and carried forward to the next period.	借方結餘 Debit balance 帳戶借方總額大於貸方總額後所得的結餘。 A balance where debit totals exceed credit totals.
貸方結餘 Credit balance 帳戶貸方總額大於借方總額後所得的結餘。 A balance where credit totals exceed debit totals.	

DSE 作答提示 Exam Tips

做分錄前先寫帳戶類別，再套用借貸規則。直接背「收現金借現金」容易在複雜題中出錯。

Before writing entries, identify account classes and then apply debit–credit rules. Memorising isolated entries can lead to errors in complex questions.

平帳時，balance c/d 放在較小的一方，balance b/d 在下一期放在相反方向。這是很多格式題的得分位。

When balancing off, balance c/d is placed on the smaller side and balance b/d appears on the opposite side next period. This is a common presentation mark.

收入和費用帳戶期末通常沒有直接帶下結餘，因為它們會轉入損益帳戶。

Revenue and expense accounts usually do not carry balances directly forward because they are transferred to the profit and loss account.

快速自測與答案 Quick Check and Answers

Q1. 複式記帳制度的核心原則是甚麼？

What is the core principle of the double–entry system?

答案：每項交易至少影響兩個帳戶，借方總額必須等於貸方總額。

Answer: Each transaction affects at least two accounts, and total debits must equal total credits.

Q2. 以現金支付薪金應如何記錄？

How should salaries paid in cash be recorded?

答案：薪金費用增加，借記薪金費用；現金資產減少，貸記現金。

Answer: Salaries expense increases, so debit salaries expense; cash asset decreases, so credit cash.

Q3. 甚麼是 balance carried down 和 balance brought down？

What are balance carried down and balance brought down?

答案：balance carried down 是期末結轉到下一期的結餘；balance brought down 是下一期承接該結餘的期初結餘。

Answer: Balance carried down is the closing balance carried forward; balance brought down is the opening balance brought into the next period.
