

C2.1 · BAFS

基礎會計概念

中英雙語完整筆記 / Complete Bilingual Notes

理解會計用途、會計等式、複式記帳及試算表。

會計的目的與角色

Purposes and Role of Accounting

理解會計的功能、會計資料對決策的重要性，以及由原始憑證至財務報表的會計循環。

Understand the functions of accounting, the importance of accounting information for decision-making, and the accounting cycle from source documents to financial statements.

會計的功能 Functions of Accounting

會計是記錄、分類、總結及傳達企業財務資料的過程，目的是協助使用者作出更有根據的決策。

Accounting is the process of recording, classifying, summarising and communicating business financial information to help users make informed decisions.

記帳是會計的一部分，主要集中於有系統地記錄交易；會計則進一步把資料整理、解釋及傳達給使用者。

Bookkeeping is part of accounting and focuses on systematic recording of transactions; accounting further organises, interprets and communicates information to users.

會計資料應具相關性、可靠性、可比較性及可理解性，才能支援管理、投資、借貸和監管決策。

Accounting information should be relevant, reliable, comparable and understandable in order to support management, investment, lending and regulatory decisions.

會計資料使用者 Users of Accounting Information

內部使用者包括東主和管理層，他們利用會計資料規劃、控制成本、評估表現及制定營運決策。

Internal users include owners and managers, who use accounting information for planning, cost control, performance evaluation and operating decisions.

外部使用者包括投資者、債權人、供應商、顧客、政府及員工，他們關心企業盈利能力、流動性、穩定性和償債能力。

External users include investors, creditors, suppliers, customers, government and employees, who care about profitability, liquidity, stability and solvency.

不同使用者的需要不同，例如銀行重視還款能力，投資者重視回報及風險，政府則重視稅務及合規資料。

Different users have different needs. Banks focus on repayment ability, investors focus on return and risk, while government focuses on taxation and compliance information.

企業實體概念 Business Entity Concept

企業實體概念指出企業與東主是分開的會計單位，因此只記錄屬於企業的交易。

The business entity concept states that the business and its owner are separate accounting units, so only transactions of the business are recorded.

東主投入企業的資源記作資本；東主從企業取用現金或貨品作私人用途，記作提取，並會減少資本。

Resources invested by the owner are recorded as capital; cash or goods taken by the owner for personal use are drawings and reduce capital.

即使獨資經營在法律上與東主沒有分開，會計上仍要把企業交易和私人交易分開處理。

Even though a sole proprietorship is not legally separate from its owner, accounting still separates business transactions from private transactions.

會計循環 Accounting Cycle

會計循環由原始憑證開始，交易先記入原始分錄簿，再過帳至分類帳。

The accounting cycle starts with source documents. Transactions are first recorded in books of original entry and then posted to ledgers.

分類帳帳戶定期平帳，結餘會編製試算表，用作檢查借貸總額是否相等。

Ledger accounts are balanced off periodically, and their balances are used to prepare a trial balance to check whether total debits equal total credits.

期末調整完成後，企業會編製財務報表，向使用者傳達一段期間的經營成果及期末財務狀況。

After period-end adjustments, financial statements are prepared to communicate performance for a period and financial position at the period end.

關鍵詞彙 Key Terms

會計 Accounting

記錄、分類、總結及傳達財務資料以支援決策的過程。

The process of recording, classifying, summarising and communicating financial information for decision-making.

記帳 Bookkeeping

有系統地記錄企業交易的工作。

The systematic recording of business transactions.

記錄 Recording

把交易按日期和金額記入會計記錄。

Entering transactions into accounting records by date and amount.

分類 Classifying

把相同性質的交易歸入適當帳戶。

Grouping transactions of the same nature into suitable accounts.

總結 Summarising

把大量會計資料整理成試算表及財務報表等摘要。

Condensing accounting data into summaries such as trial balances and financial statements.

傳達 Communicating

把財務資料以報表或分析形式提供給使用者。

Providing financial information to users through reports or analysis.

企業實體 Business entity

會計上被視為獨立於東主的記錄單位。

An accounting unit treated as separate from its owner.

會計循環 Accounting cycle

由原始憑證記錄交易至編製財務報表的一連串程序。

The sequence of procedures from recording transactions from source documents to preparing financial statements.

原始憑證 Source document

證明交易發生的文件，例如發票、收據和支票存根。

A document proving that a transaction has occurred, such as an invoice, receipt or cheque counterfoil.

DSE 作答提示 Exam Tips

遇到「會計有何用處」題目，不要只寫記錄交易；要連接到決策，例如控制成本、評估盈利能力或申請貸款。

For questions on the usefulness of accounting, do not only write recording transactions; link it to decisions such as cost control, profitability evaluation or loan application.

企業實體概念常用於解釋為何東主私人支出不應記入企業支出，或為何提取會減少資本。

The business entity concept is often used to explain why owners' private expenses should not be recorded as business expenses, or why drawings reduce capital.

快速自測與答案 Quick Check and Answers

Q1. 記帳與會計有何分別？

What is the difference between bookkeeping and accounting?

答案：記帳主要是有系統地記錄交易；會計包括記錄、分類、總結、解釋及傳達財務資料，範圍較廣。

Answer: Bookkeeping mainly records transactions systematically; accounting is broader and includes recording, classifying, summarising, interpreting and communicating financial information.

Q2. 東主為私人旅行付款，應否記作企業支出？

Should an owner's private travel payment be recorded as a business expense?

答案：不應。根據企業實體概念，私人交易與企業交易分開，該款項應視作東主提取。

Answer: No. Under the business entity concept, private and business transactions are separated, so the payment should be treated as drawings.

Q3. 試算表在會計循環中的作用是甚麼？

What is the role of a trial balance in the accounting cycle?

答案：它列出分類帳結餘，檢查借方總額是否等於貸方總額，為編製財務報表提供基礎。

Answer: It lists ledger balances, checks whether total debits equal total credits, and provides a basis for preparing financial statements.

會計等式

The Accounting Equation

掌握資產、負債、資本、收入、支出及提取的概念，並分析交易如何影響會計等式。

Master the concepts of assets, liabilities, capital, revenues, expenses and drawings, and analyse how transactions affect the accounting equation.

基本會計等式 Basic Accounting Equation

基本會計等式是：資產 = 資本 + 負債。它反映企業資源由東主投資或外部債權人提供。	The basic accounting equation is: assets = capital + liabilities. It shows that business resources are financed by owner's investment or external creditors.
資產是企業擁有或控制並預期帶來未來經濟利益的資源，例如現金、存貨、應收帳款、設備和定期存款。	Assets are resources owned or controlled by a business and expected to bring future economic benefits, such as cash, inventory, trade receivables, equipment and fixed deposits.
負債是企業因過去交易而需要向外部人士償還的責任，例如應付帳款、其他應付款和銀行貸款。	Liabilities are obligations to outsiders arising from past transactions, such as trade payables, other payables and bank loans.
資本是東主在企業中的權益，可理解為企業資產扣除負債後屬於東主的部分。	Capital is the owner's interest in the business and can be understood as the part of assets belonging to the owner after deducting liabilities.

收入、支出與資本 Revenues, Expenses and Capital

收入是企業日常營運產生的經濟利益流入，例如銷貨收入、服務收入和佣金收入；收入會增加資本。	Revenue is the inflow of economic benefits from ordinary activities, such as sales revenue, service income and commission income; revenue increases capital.
支出是為賺取收入而耗用的經濟利益，例如租金、薪金、電費和廣告費；支出會減少資本。	Expenses are economic benefits consumed to earn revenue, such as rent, wages, electricity and advertising; expenses reduce capital.
提取是東主從企業取用現金或貨品作私人用途。提取不是支出，因為它不是為賺取收入而發生。	Drawings are cash or goods taken by the owner for personal use. Drawings are not expenses because they are not incurred to earn revenue.
擴展會計等式可寫成：資產 = 資本 + 收入 - 支出 - 提取 + 負債。	The expanded accounting equation can be written as: assets = capital + revenue - expenses - drawings + liabilities.

交易對會計等式的影響 Effects of Transactions on the Accounting Equation

每項交易至少影響兩個項目，但會計等式必須保持平衡。	Each transaction affects at least two items, but the accounting equation must remain balanced.
例如東主投入現金會令資產增加，同時資本增加；賒購貨品會令存貨增加，同時應付帳款增加。	For example, owner's cash investment increases assets and capital; buying goods on credit increases inventory and trade payables.
以現金償還供應商會令現金減少，同時應付帳款減少；收取顧客欠款會令現金增加，同時應收帳款減少。	Paying a supplier in cash decreases cash and trade payables; collecting a debt from a customer increases cash and decreases trade receivables.
購買設備時，若以現金付款，通常是一項資產增加而另一項資產減少；若以貸款付款，資產和負債同時增加。	When equipment is purchased for cash, one asset increases and another asset decreases; if financed by a loan, assets and liabilities both increase.

常見分類判斷 Common Classification Judgements

應收帳款是顧客尚未支付的款項，屬資產；應付帳款是企業尚未支付供應商的款項，屬負債。

Trade receivables are amounts owed by customers and are assets; trade payables are amounts owed to suppliers and are liabilities.

其他應收款和其他應付款通常不是來自買賣貨品的主要交易，但仍分別屬於資產和負債。

Other receivables and other payables are usually not from main trading transactions, but they are still assets and liabilities respectively.

定期存款通常屬資產，因為企業控制該存款並預期日後收回本金和利息。

A fixed deposit is usually an asset because the business controls the deposit and expects to receive principal and interest in the future.

關鍵詞彙 Key Terms

資產 Assets

企業擁有或控制並預期帶來未來經濟利益的資源。

Resources owned or controlled by a business that are expected to bring future economic benefits.

負債 Liabilities

企業因過去交易而需要向外部人士償還的責任。

Obligations to outsiders arising from past transactions.

資本 Capital

東主在企業中的權益。

The owner's interest in the business.

會計等式 Accounting equation

資產、資本和負債之間的基本關係：資產 = 資本 + 負債。

The basic relationship among assets, capital and liabilities: assets = capital + liabilities.

收入 Revenue

日常營運產生並會增加資本的經濟利益流入。

Inflow of economic benefits from ordinary activities that increases capital.

支出 Expenses

為賺取收入而耗用並會減少資本的經濟利益。

Economic benefits consumed to earn revenue that reduce capital.

提取 Drawings

東主從企業取用資源作私人用途，會減少資本。

Resources taken by the owner from the business for personal use, reducing capital.

應收帳款 Trade receivables

顧客因賒購貨品或服務而欠企業的款項。

Amounts owed by customers for goods or services bought on credit.

應付帳款 Trade payables

企業因賒購貨品或服務而欠供應商的款項。

Amounts owed to suppliers for goods or services bought on credit.

DSE 作答提示 Exam Tips

會計等式題要逐項寫出「哪個項目增加或減少」，不要只寫總額有變。

For accounting equation questions, state which item increases or decreases; do not only say the total changes.

提取不是支出。若題目說東主取貨自用，應減少存貨及資本，而不是記作銷貨成本。

Drawings are not expenses. If the owner takes goods for private use, reduce inventory and capital instead of recording cost of sales.

快速自測與答案 Quick Check and Answers

Q1. 企業以現金 \$5,000 償還供應商，會計等式如何變化？

A business pays \$5,000 cash to a supplier. How does the accounting equation change?

答案：資產中的現金減少 \$5,000，負債中的應付帳款減少 \$5,000，等式仍然平衡。

Answer: Cash under assets decreases by \$5,000 and trade payables under liabilities decrease by \$5,000; the equation remains balanced.

Q2. 賒銷貨品會即時增加哪兩項？

Which two items increase immediately when goods are sold on credit?

答案：應收帳款增加，同時收入增加；收入最終會增加資本。

Answer: Trade receivables increase and revenue increases; revenue eventually increases capital.

Q3. 東主提取現金自用是否會影響資本？

Does the owner's cash drawings affect capital?

答案：會。提取會令現金減少，同時令資本減少。

Answer: Yes. Drawings decrease cash and also decrease capital.

複式記帳制度

Double-Entry System

理解複式記帳原理、借方和貸方規則，並能判斷帳戶結餘及完成平帳。

Understand the principles of double entry, debit and credit rules, and determine account balances and balance off accounts.

複式記帳原理 Principles of Double Entry

複式記帳制度規定每項交易至少記入兩個帳戶，一個借方、一個貸方，且借方總額必須等於貸方總額。

The double-entry system records each transaction in at least two accounts, one debit and one credit, and total debits must equal total credits.

帳戶通常以 T 字帳形式表示，左邊為借方，右邊為貸方。借方和貸方本身不等於增加或減少，要視乎帳戶類別而定。

Accounts are often shown as T-accounts, with the left side as debit and the right side as credit. Debit and credit do not always mean increase or decrease; it depends on the account type.

複式記帳有助保留交易的雙重影響，亦為編製試算表及財務報表提供基礎。

Double entry keeps the dual effect of transactions and provides the basis for preparing trial balances and financial statements.

借方與貸方規則 Debit and Credit Rules

資產、支出和提取增加時記借方；減少時記貸方。

Increases in assets, expenses and drawings are recorded on the debit side; decreases are recorded on the credit side.

負債、資本和收入增加時記貸方；減少時記借方。

Increases in liabilities, capital and revenue are recorded on the credit side; decreases are recorded on the debit side.

可以用 AED 增加記借方、LCR 增加記貸方來記憶：Assets, Expenses, Drawings debit up; Liabilities, Capital, Revenue credit up。

A useful memory aid is AED increase by debit and LCR increase by credit: Assets, Expenses, Drawings debit up; Liabilities, Capital, Revenue credit up.

由交易到分錄 From Transaction to Entry

分析交易時，先辨認受影響的帳戶，再判斷帳戶類別，最後決定借方或貸方。

When analysing a transaction, first identify the affected accounts, then decide their account types, and finally determine debit or credit.

例如現金購買設備：借記設備，貸記現金，因為設備資產增加而現金資產減少。

For example, buying equipment for cash: debit equipment and credit cash because equipment asset increases and cash asset decreases.

例如向銀行借款：借記銀行 / 現金，貸記銀行貸款，因為資產增加而負債增加。

For example, taking a bank loan: debit bank/cash and credit bank loan because assets increase and liabilities increase.

例如支付租金：借記租金支出，貸記現金，因為支出增加而現金減少。

For example, paying rent: debit rent expense and credit cash because expense increases and cash decreases.

平帳與結餘 Balancing Off Accounts and Balances

平帳是比較帳戶借方和貸方總額，計算較小一方需要補上的差額，以得出結餘。

Balancing off compares the debit and credit totals of an account and calculates the difference needed on the smaller side to find the balance.

結轉結餘 c/d 是期末放在較小一方使帳戶兩邊相等的數字；承前結餘 b/d 是下一期把該結餘帶回正常一方。

Balance carried down (c/d) is placed on the smaller side at period end to make both sides equal; balance brought down (b/d) brings the balance to the normal side in the next period.

資產和支出帳戶通常有借方結餘；負債、資本和收入帳戶通常有貸方結餘。

Asset and expense accounts usually have debit balances; liability, capital and revenue accounts usually have credit balances.

關鍵詞彙 Key Terms

複式記帳制度 Double-entry system

每項交易以相等金額記入借方和貸方的記帳制度。

A bookkeeping system that records each transaction with equal debit and credit amounts.

帳戶 Account

用來記錄某一類交易增減變化的分類記錄。

A classified record used to show increases and decreases in a particular item.

借方 Debit

帳戶左方；資產、支出及提取增加時記借方。

The left side of an account; increases in assets, expenses and drawings are debited.

貸方 Credit

帳戶右方；負債、資本及收入增加時記貸方。

The right side of an account; increases in liabilities, capital and revenue are credited.

平帳 Balancing off accounts

計算帳戶借貸兩方差額並帶出結餘的程序。

The process of calculating the difference between debit and credit sides and carrying forward the balance.

承前結餘 Balance brought down (b/d)

由上一期帶入本期的帳戶結餘。

The account balance brought forward from the previous period.

結轉結餘 Balance carried down (c/d)

期末結轉至下一期的帳戶結餘。

The account balance carried forward to the next period.

借方結餘 Debit balance

帳戶借方總額大於貸方總額的結餘。

A balance where the debit total is greater than the credit total.

貸方結餘 Credit balance

帳戶貸方總額大於借方總額的結餘。

A balance where the credit total is greater than the debit total.

DSE 作答提示 Exam Tips

不要把「借方」直接理解為增加。先判斷帳戶類別，再套用借貸規則。

Do not treat “debit” as simply meaning increase. Identify the account type first, then apply debit and credit rules.

寫分錄時必須借貸相等；若只有一邊，通常代表未完整反映交易的雙重影響。

Entries must have equal debit and credit amounts. If only one side is written, the dual effect of the transaction is usually incomplete.

快速自測與答案 Quick Check and Answers

Q1. 企業以現金購買辦公設備，應借記和貸記哪個帳戶？

A business buys office equipment for cash. Which accounts are debited and credited?

答案：借記辦公設備，貸記現金。設備資產增加，現金資產減少。

Answer: Debit office equipment and credit cash. Equipment asset increases and cash asset decreases.

Q2. 收入帳戶增加時記借方還是貸方？

When a revenue account increases, is it debited or credited?

答案：記貸方。收入增加會令資本增加，而收入帳戶正常有貸方結餘。

Answer: It is credited. Revenue increases capital and revenue accounts normally have credit balances.

Q3. 何謂承前結餘 b/d ?

What is balance brought down (b/d)?

答案：它是由上一期帶入本期的帳戶結餘，通常放在帳戶的正常結餘一方。

Answer: It is the account balance brought forward from the previous period, usually placed on the normal balance side of the account.

試算表

Trial Balance

學會在期末編製試算表，理解試算表的功能及限制，並辨認哪些錯誤未必會令試算表不平衡。

Learn to prepare a trial balance at period end, understand its functions and limitations, and identify errors that may not make the trial balance disagree.

試算表的編製 Preparing a Trial Balance

試算表是在某一日期列出所有分類帳借方結餘和貸方結餘的表。

A trial balance is a list of all debit and credit balances in the ledgers at a particular date.

編製時先完成分類帳平帳，然後把借方結餘列在借方欄，把貸方結餘列在貸方欄。

To prepare it, balance off ledger accounts first, then place debit balances in the debit column and credit balances in the credit column.

試算表借方總額應等於貸方總額，因為每項交易在複式記帳制度下都有相等借貸記錄。

The debit total should equal the credit total because every transaction has equal debit and credit entries under the double-entry system.

試算表的功能 Functions of a Trial Balance

試算表可檢查帳簿的算術準確性，特別是借貸記錄是否總額相等。

A trial balance checks the arithmetical accuracy of books, especially whether debit and credit records are equal in total.

它把分類帳結餘集中在一張表內，方便編製損益表、財務狀況表及期末調整。

It gathers ledger balances in one schedule, making it easier to prepare income statements, statements of financial position and period-end adjustments.

若試算表不平衡，代表帳簿可能存在錯誤，例如只記一邊、金額不相等或結餘放錯欄。

If a trial balance disagrees, there may be errors such as recording one side only, unequal amounts or placing a balance in the wrong column.

試算表的限制 Limitations of a Trial Balance

試算表平衡只代表借貸總額相等，不代表所有交易都已正確記錄。

An agreed trial balance only means total debits equal total credits; it does not prove that all transactions are correctly recorded.

漏記錯誤不會影響試算表平衡，因為整項交易沒有記入任何帳戶。

An error of omission does not affect trial balance agreement because the whole transaction is not recorded in any account.

原則性錯誤、補償性錯誤、完全反向分錄和金額同時錯誤等，也可能令試算表仍然平衡。

Errors of principle, compensating errors, complete reversal of entries and equal amount errors may also leave the trial balance agreed.

常見錯誤判斷 Common Error Judgements

若只漏記借方或貸方其中一邊，試算表通常會不平衡。

If only one debit or credit entry is omitted, the trial balance usually disagrees.

若把借方結餘錯放到貸方欄，差額通常會是該結餘的兩倍。

If a debit balance is placed in the credit column, the difference is usually twice the amount of that balance.

若交易被完整記入錯誤帳戶但借貸相等，試算表仍會平衡，但財務報表分類可能錯誤。

If a transaction is completely recorded in the wrong account with equal debits and credits, the trial balance still agrees but financial statement classification may be wrong.

關鍵詞彙 Key Terms

試算表 Trial balance

在某一日期列出分類帳借方和貸方結餘的表。

A list of debit and credit ledger balances at a particular date.

相符 Agree

試算表借方總額等於貸方總額。

The debit total of the trial balance equals the credit total.

不相符 Disagree

試算表借方總額不等於貸方總額。

The debit total of the trial balance does not equal the credit total.

錯誤 Errors

會計記錄中的遺漏、分類、金額或借貸方向錯誤。

Omissions, classification, amount or debit–credit direction mistakes in accounting records.

漏記錯誤 Error of omission

整項交易沒有記入帳簿。

A whole transaction is not recorded in the books.

原則性錯誤 Error of principle

把交易記入錯誤類別的帳戶，例如把資產誤記作支出。

Recording a transaction in an account of the wrong class, such as treating an asset as an expense.

補償性錯誤 Compensating errors

兩個或以上錯誤互相抵銷，令試算表仍然平衡。

Two or more errors offset each other so that the trial balance still agrees.

完全反向分錄 Complete reversal of entries

應借記的帳戶被貸記，應貸記的帳戶被借記，但金額相同。

The account to be debited is credited and the account to be credited is debited by the same amount.

DSE 作答提示 Exam Tips

試算表平衡不等於沒有錯誤。考試常要求指出「不會被試算表揭示」的錯誤。

An agreed trial balance does not mean there are no errors. Exams often ask for errors not revealed by a trial balance.

判斷錯誤是否影響試算表時，重點看借方和貸方總額是否仍然相等，而不是看帳戶名稱是否正確。

When judging whether an error affects the trial balance, focus on whether debit and credit totals remain equal, not only whether account names are correct.

快速自測與答案 Quick Check and Answers

Q1. 試算表平衡是否證明帳簿完全正確？

Does an agreed trial balance prove that the books are completely correct?

答案：不能。它只證明借貸總額相等，仍可能存在漏記、原則性錯誤或完全反向分錄等錯誤。

Answer: No. It only proves total debits equal total credits; errors such as omission, principle errors or complete reversal may still exist.

Q2. 整項賒購交易沒有入帳，試算表會否不平衡？

If a whole credit purchase transaction is not recorded, will the trial balance disagree?

答案：通常不會，因為借方和貸方都沒有記錄，兩邊總額仍可能相等。

Answer: Usually no, because both debit and credit entries are omitted, so both totals may still be equal.

Q3. 若租金支出誤記入設備帳戶，試算表會否揭示錯誤？

If rent expense is wrongly recorded in the equipment account, will the trial balance reveal the error?

答案：通常不會。借貸仍然相等，但屬原則性錯誤，因為支出被誤記作資產。

Answer: Usually no. Debits and credits still agree, but it is an error of principle because an expense is recorded as an asset.
